See also: Top 10 DIY blogs For a beginner to Photoshop, there are a few tools and toolsets that can be leveraged to start creating. 1. The image creating tools Although Photoshop's pixel and image editing tools can be daunting to a beginner, they are easy to learn and quickly become a workflow. One of the best ways to get started is to start with an image, as many people making images will have one or many assets they are looking to manipulate. For a stock photo library, an easy way to get started is to use the Photoshop Content-Aware Fill tool. This tool is the most efficient way to fill in areas of a photo. The tool looks at the edges of surrounding areas to create a so-called guess of the area that needs to be filled. While not perfect, this feature is always able to be made to work for solid area filling. Using the Spot Healing Brush tool, it is easy to spot problem areas on a photo. Common problems that are "healed" using this tool are spots on a photo or duplicated areas across a photo. The Spot Healing Brush tool is built into Photoshop and is one of the more basic tools that can be used as an aid to creating images. It is also the best way to fix basic issues. If there is a spot or a particular area that just needs a touch up, use this tool and the magic that it can do. For making a photo personal, taking a picture of an item you like and turning it into your desktop or mobile background is an easy way to personalize your work environment. The File > Place command is the easiest way to do this. The File > Place command is not as useful as the Photoshop Content-Aware Fill tool as it replaces content. However, it is the fastest way to have a photo of your item on your desktop without working too hard to figure it out. Also, if you want to create custom images for use in your own social media or marketing campaigns, having a number of the image-editing tools on hand is the way to go. From there, using Photoshop's tools such as the Magic Wand, Eraser, Gradient Tool, Invert, and others can be leveraged to take a photo and make it become something entirely different. The majority of professional users of Photoshop use the Content-Aware Fill tool. But many beginners

The present invention relates to a new and distinct cultivar of Petunia plant botanically known as Petunia×hybrida and hereinafter referred to by the cultivar name 'Balsomeun'. The new cultivar originated in a controlled breeding program in Arroyo Grande, Calif. during April 2007. The objective of the breeding program was the development of Petunia cultivars with unique flower colors, multiple flower types and excellent garden performance. The new Petunia cultivar is the result of cross-pollination. The female (seed) parent of the new cultivar is the proprietary Petunia×hybrida breeding selection coded JF-BB-40, not patented, characterized by its dark red-colored flowers, medium green-colored foliage, vigorous, upright growth habit and excellent garden performance. The male (pollen) parent of the new cultivar is the proprietary Petunia×hybrida breeding selection coded JF-AAA-58, not patented, characterized by its dark red-colored flowers, medium green-colored foliage, relatively slow to grow and respond to short day conditions, dark green-colored foliage, vigorous, upright growth habit and freely branching growth habit. The new cultivar was discovered and selected as a single flowering plant within the progeny of the above stated cross-pollination during April 2008 in a controlled environment in Arroyo Grande, Calif. Asexual reproduction of the new cultivar by terminal stem cuttings since April 2008 in Arroyo Grande, Calif. and West Chicago, Ill. has demonstrated that the new cultivar reproduces true to type with all of the characteristics, as herein described, firmly fixed and retained through successive generations of such asexual propagation.
